

Command line to open a tab i can send from my program

<https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress='Username'&password='Password'>

Encrypt Username & Password with base64

```
var plainTextBytes = System.Text.Encoding.UTF8.GetBytes(txtun.Text);  
var userName = System.Convert.ToBase64String(plainTextBytes);
```

```
var passwordbyte = System.Text.Encoding.UTF8.GetBytes(txtpw.Text);  
var password = System.Convert.ToBase64String(passwordbyte);
```

Example.

if

<https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=nitin@mandavconsultancy.com&password=123>

After Encrypt looks like this

<https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=bml0aW5AbWFuZGF2Y29uc3VsdGFuY3kuY29t&password=MTIz>

For Open In New Window

string

[url=https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=bml0aW5AbWFuZGF2Y29uc3VsdGFuY3kuY29t&password=MTIz;](https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=bml0aW5AbWFuZGF2Y29uc3VsdGFuY3kuY29t&password=MTIz)

or

string

[url=https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=userName&password=password;](https://www.escrowbaseweb.com/account/login?UsernameOrEmailAddress=userName&password=password;)
(in this username & Password are from above encrypted Variables)

```
Process process = new Process();  
process.StartInfo.FileName = url;  
process.StartInfo.Arguments = url + " --new-window";  
started= process.Start();
```
